CONGRATULATIONS

You’re now the proud owner of a YETI® Panga™ — the fully submersible, nearly indestructible gear bag. Its durable design and construction assure you years of extreme performance, whether you’re hitting the water or heading off the grid.
IN A LEAGUE ALL OF ITS OWN —
GET TO KNOW YOUR PANGA™

1 HydroLok™ Zipper
This intensely durable Zipper was inspired by zippers found in HazMat suits, so it can tackle some pretty rough stuff. We put the HydroLok Zipper to the test in some of the world’s toughest conditions, so explore without worry — water doesn’t stand a chance of breaking through this airtight seal.

2 U-Dock™
Just like our Hopper® soft coolers, your Panga is outfitted with a U-Dock to lock the HydroLok Zipper in place and create an airtight seal. Always rinse it down, wipe it clean, and apply zipper lube after returning to civilization. For more zipper care instructions, see our zipper lube packet or learn more at YETI.com.

3 ThickSkin™ Shell
You better have some thick skin to handle what’s bound to come your way in the wild, which is why the Panga got some ThickSkin of its own. This durable material covers your Panga inside and out to protect against any knockdowns and drag-outs with Mother Nature.

4 DryHaul™ Straps & MetalLock™ Hardware
The DryHaul Straps are meant to be as durable as they are comfortable, complete with the MetalLock Hardware, that can take on smacks and whacks without breaking. The Panga Duffel offers removable DryHaul Straps for flexible carrying, while the Panga Backpack’s DryHaul Straps have a permanent stronghold for safe and secure travel.

5 QuickGrab™ Lash Points
For when you need to get up and go, just use your QuickGrab Lash Points and head out. They offer an additional way to haul your Panga and are strong enough to strap onto a pack mule or 4x4 for your next backcountry trip.
Additional Panga™
Submersible Duffel Features

Stowaway Mesh Pockets
EVA Molded Bottom
Zipper Grips
Zipper Latch

Additional Panga
Submersible Backpack Features

Stowaway Mesh Pocket
Interior Sleeve
EVA Molded Back Panel
Removable Chest Strap
Removable Waist Belt
Zipper Grips
HitchPoint™ Grid
PRO TIPS

Attaching DryHaul™ Straps
For Panga™ Submersible Duffel Only

To affix your DryHaul Straps, snap open the hardware, thread through the webbing, and check that the gates are shut in place. Adjust the DryHaul Straps to your height by pulling the bottom Straps tight. Make sure the Straps sit comfortably on your shoulders.

1 Attach Straps next to the closed zipper, facing the hardware gate away from the zipper.

2 Attach the bottom of the DryHaul Strap through the webbing in an upward motion toward the top of the Strap.

Attaching Chest Strap & Waist Belt
For Panga™ Submersible Backpack Only

For added stability and even greater carrying comfort, affix your chest strap and waist belt to your backpack.

Before you attach the chest straps, put the backpack on and select the loop that is approximately one inch down from your collar bone. See below for recommended orientation.

Chest Strap
Push the plastic clip through the selected loop, then pull the plastic clip back to ensure it’s firmly attached to the loop. Use the illustration on the right as your guide. Repeat on the other side.

Waist Belt
There are two loops on the bottom of each side of the backpack. With the YETI logo facing right side up, find the hooks at the ends of each waist strap. Then thread the hooks under and over the loops on the backpack’s bottom back panels. See above for orientation.
Your Panga is designed to stand up to the hazards of the wild, but a little maintenance goes a long way in extending the life of your duffel or backpack.

**Zipper Care**
At the beginning (and end) of every season, clean your zipper with warm water and mild soap. Then carefully apply a small amount of the included zipper lubricant to the U-Dock™. Pull the zipper open and closed a couple of times to disperse the lubricant.

**Cleaning**
If your Panga is muddy or dirty, use warm water and mild soap to wipe it down and take the opportunity to apply some more zipper lube.

**Storage**
Always make sure your Panga is completely dry and the zipper is in the closed position before putting it away for short or long-term storage.

---

**HydroLok™ Zipper Seal Testing**

We test every Panga for 30 minutes underwater to ensure a completely waterproof seal. And we want to make sure you continue to have the same superior zipper performance.

To test the zipper seal, close the HydroLok Zipper completely and place pressure onto the gear bag. Listen for any air that might have broken the seal or material. If you hear or notice any air leaks, open and close the zipper a couple times and then test again.

If the leak persists, please visit YETI.com/warranty-information.

We make gear that helps you stay out longer, travel farther, and live harder. Here's to new adventures with your YETI® Panga™.

Check us out on YouTube, Instagram, Facebook, Twitter, and Spotify. Be sure to show the rest of the YETI Nation how you live wild by tagging your stories and photos with #BuiltForTheWild.
All YETI® Panga™ submersible duffels and backpacks are warranted against defects in materials and workmanship for 3 years after the original date of purchase. Here are some key things to remember about our warranty:

- Warranty applies only to the original owner.
- Warranty is void if the duffel or backpack is used commercially, structurally altered, damaged as a result of abnormal use, or subjected to stress beyond the normal physical limits of the materials used in the body or components.
- Normal wear and tear is not warranted.
- Warranty does not include any manufacturer responsibility due to incidental or consequential damages resulting from the use of the bag.

We take pride in the products we make. If anything goes wrong within the warranty period, please visit yeti.com/warranty-information.
